

PLUMBING FITTINGS & ACCESSORIES MAINTENANCE

Compas plumbing fittings are not lacquered and will patinate over time. The finishes require a standard maintenance in order to keep their beauty over time.

No harsh detergent or powdered cleaners should be used. No scrubbing of any sort especially with abrasive sponges.

Only use a soft wet white cloth or sponge using mild soap. Rinse with clear water and whipped dry using a clean cotton cloth.

Polished silver plated items will tarnish and need to be maintained like silverware, unless if you prefer to keep the natural soft shading of time then please refer to the same directions mentioned above.
